

Together we learn, grow and dream

Science long term overview - Year A

<u>Year 1 and 2 Year A Autumn 1 and 2 - Everyday materials</u>	
<p>Key learning All objects are made of one or more materials. Some objects can be made from different materials e.g. plastic, metal or wooden spoons. Materials can be described by their properties e.g. shiny, stretchy, rough etc. Some materials e.g. plastic can be in different forms with very different properties.</p>	<p><u>Vocabulary</u> <i>object, material, wood, plastic, glass, metal, water, rock, brick, paper, fabric, elastic, foil, card/cardboard, rubber, wool, clay, hard, soft, stretchy, stiff, bendy, floppy, waterproof, absorbent, breaks/tears, rough, smooth, shiny, dull, see-through, not see-through</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to: • Use all their senses in hands-on exploration of natural materials. (Nursery - Materials, including changing materials) • Explore collections of materials with similar and/or different properties. (Nursery - Materials, including changing materials) • Talk about the differences between materials and changes they notice. (Nursery - Materials, including changing materials)</p>	<p><u>End point:</u> I can: • distinguish between an object and the material from which it is made. • identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. • describe the simple physical properties of a variety of everyday materials. • compare and group together a variety of everyday materials on the basis of their simple physical properties.</p>
<u>Year 1 and 2 Year A Spring 1 and 2 - Animals including humans</u>	
<p><u>Key learning</u> Animals, including humans, have offspring which grow into adults. In humans and some animals, these offspring will be young, such as babies or kittens, that grow into adults. In other animals, such as chickens or insects, there may be eggs laid that hatch to young or other stages which then grow to adults. The young of some animals do not look like their parents e.g. tadpoles. All animals, including</p>	<p><u>Vocabulary</u> <i>offspring, reproduction, growth, child, young/old stages (examples - chick/hen, baby/child/adult, caterpillar/butterfly), exercise, heartbeat, breathing, hygiene, germs, disease, food types (examples – meat, fish, vegetables, bread, rice, pasta)</i></p>

Together we learn, grow and dream

<p>humans, have the basic needs of feeding, drinking and breathing that must be satisfied in order to survive. To grow into healthy adults, they also need the right amounts and types of food and exercise. Good hygiene is also important in preventing infections and illnesses.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Identify and name a variety of common animals that are carnivores, herbivores and omnivores. (Y1 - Animals, including humans) • Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. (Y1 - Animals, including humans) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • notice that animals, including humans, have offspring which grow into adults. • find out about and describe the basic needs of animals, including humans, for survival (water, food and air). • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene.
<p><u>Year 1 and 2 Year A Summer 1 - Living Things and their Habitats</u></p>	
<p><u>Key learning</u> All objects are either living, dead or have never been alive. Living things are plants (including seeds) and animals. Dead things include dead animals and plants and parts of plants and animals that are no longer attached e.g. leaves and twigs, shells, fur, hair and feathers (This is a simplification, but appropriate for Year 2 children.) An object made of wood is classed as dead. Objects made of rock, metal and plastic have never been alive (again ignoring that plastics are made of fossil fuels). Animals and plants live in a habitat to which they are suited, which means that animals have suitable features that help them move and find food and plants have suitable features that help them to grow well. The habitat provides the basic needs of the animals and plants – shelter, food and water. Within a habitat there are different micro-habitats e.g. in a woodland – in the leaf litter, on the bark of trees, on the leaves. These micro-habitats have different conditions e.g. light or dark, damp or dry. These conditions affect which plants and animals live there. The plants and animals in a habitat depend on each other for food and shelter etc. The way that</p>	<p><u>Vocabulary</u> <i>living, dead, never been alive, suited, suitable, basic needs, food, food chain, shelter, move, feed</i> <i>names of local habitats e.g. pond, woodland etc.</i> <i>names of micro-habitats e.g. under logs, in bushes etc.</i></p>

Together we learn, grow and dream

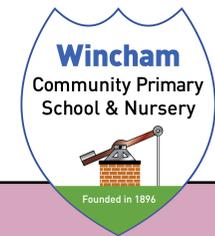

<p>animals obtain their food from plants and other animals can be shown in a food chain.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. (Y1 - Plants) • identify and describe the basic structure of a variety of common flowering plants, including trees. (Y1 - Plants) • identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. (Y1 - Animals including humans) • identify and name a variety of common animals that are carnivores, herbivores and omnivores. (Y1 - Animals including humans) • describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). (Y1 – Animals, including humans) • observe changes across the four seasons. (Y1 - Seasonal changes) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • explore and compare the differences between things that are living, dead, and things that have never been alive • identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other • identify and name a variety of plants and animals in their habitats, including micro-habitats • describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food
<p><u>Year 1 and 2 Year A Summer 2 - Plants</u></p>	
<p><u>Key learning</u> Plants may grow from either seeds or bulbs. These then germinate and grow into seedlings which then continue to grow into mature plants. These mature plants may have flowers which then develop into seeds, berries, fruits etc. Seeds and bulbs need to be planted outside at particular times of year and they will germinate and grow at different rates. Some plants are better suited to growing in full sun and some grow better in partial or full shade. Plants also need different amounts of water and space to grow well and stay healthy.</p>	<p><u>Vocabulary</u> <i>leaf, flower, blossom, petal, fruit, berry, root, seed, trunk, branch, stem, bark, stalk, bud</i> <i>Names of trees in the local area</i> <i>light, shade, sun, warm, cool, water, grow, healthy</i></p>
<p><u>Required prior knowledge</u></p>	<p><u>End point:</u></p>

Together we learn, grow and dream

<p>Children should know and be able to:</p> <ul style="list-style-type: none"> • Identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. (Y1 - Plants) • Identify and describe the basic structure of a variety of common flowering plants, including trees. (Y1 - Plants) 	<p>I can:</p> <ul style="list-style-type: none"> • observe and describe how seeds and bulbs grow into mature plants. • find out and describe how plants need water, light and a suitable temperature to grow and stay healthy.
<p><u>Year 3 and 4 Year A Autumn 1 and 2 - Animals including humans</u></p>	
<p><u>Key learning</u></p> <p>Animals, unlike plants which can make their own food, need to eat in order to get the nutrients they need. Food contains a range of different nutrients – carbohydrates (including sugars), protein, vitamins, minerals, fats, sugars, water – and fibre that are needed by the body to stay healthy. A piece of food will often provide a range of nutrients. Humans, and some other animals, have skeletons and muscles which help them move and provide protection and support.</p>	<p><u>Vocabulary</u></p> <p><i>nutrition, nutrients, carbohydrates, sugars, protein, vitamins, minerals, fibre, fat, water, skeleton, bones, muscles, joints, support, protect, move, skull, ribs, spine digestive system, digestion, mouth, teeth, saliva, oesophagus, stomach, small intestine, nutrients, large intestine, rectum, anus, teeth, incisor, canine, molar, premolars, herbivore, carnivore, omnivore, producer, predator, prey, food chain</i></p>
<p><u>Required prior knowledge</u></p> <p>Children should know and be able to:</p> <ul style="list-style-type: none"> • identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. (Y1 - Animals, including humans) • identify and name a variety of common animals that are carnivores, herbivores and omnivores. (Y1 - Animals, including humans) • describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). (Y1 - Animals, including humans) • find out about and describe the basic needs of animals, including humans, for survival (water, food and air). (Y2 - Animals, including humans) • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene. (Y2 - Animals, including humans) 	<p><u>End point:</u></p> <p>I can:</p> <ul style="list-style-type: none"> • identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food – they get nutrition from what they eat. • identify that humans and some other animals have skeletons and muscles for support, protection and movement. • describe the simple functions of the basic parts of the digestive system in humans. • Identify the different types of teeth in humans and their simple functions.

Together we learn, grow and dream

<p><u>Year 3 and 4 Year A Spring 1 - Sound</u></p>	
<p><u>Key learning</u> A sound produces vibrations which travel through a medium from the source to our ears. Different mediums such as solids, liquids and gases can carry sound, but sound cannot travel through a vacuum (an area empty of matter). The vibrations cause parts of our body inside our ears to vibrate, allowing us to hear (sense) the sound. The loudness (volume) of the sound depends on the strength (size) of vibrations which decreases as they travel through the medium. Therefore, sounds decrease in volume as you move away from the source. A sound insulator is a material which blocks sound effectively. Pitch is the highness or lowness of a sound and is affected by features of objects producing the sounds. For example, smaller objects usually produce higher pitched sounds.</p>	<p><u>Vocabulary</u> <i>sound, source, vibrate, vibration, travel, pitch (high, low), volume, faint, loud, insulation</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Explore how things work. (Nursery – Sound) • Describe what they see, hear and feel whilst outside. (Reception – Sound) • Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. (Y1 - Animals, including humans) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • identify how sounds are made, associating some of them with something vibrating. • recognise that vibrations from sounds travel through a medium to the ear. • find patterns between the pitch of a sound and features of the object that produced it. • find patterns between the volume of a sound and the strength of the vibrations that produced it. • recognise that sounds get fainter as the distance from the sound source increases.
<p><u>Year 3 and 4 Year A Spring 2 - Electricity</u></p>	
<p><u>Key learning</u> Many household devices and appliances run on electricity. Some plug in to the mains and others run on batteries. An electrical circuit</p>	<p><u>Vocabulary</u> <i>electricity, electrical appliance/device, mains, plug, electrical circuit, complete circuit, component, cell, battery, positive, negative,</i></p>

Together we learn, grow and dream

<p>consists of a cell or battery connected to a component using wires. If there is a break in the circuit, a loose connection or a short circuit, the component will not work. A switch can be added to the circuit to turn the component on and off. Metals are good conductors so they can be used as wires in a circuit. Non-metallic solids are insulators except for graphite (pencil lead). Water, if not completely pure, also conducts electricity.</p>	<p><i>connect/connections, loose connection, short circuit, crocodile clip, bulb, switch, buzzer, motor, conductor, insulator, metal, non-metal, symbol</i></p> <p><i>N.B. Children in Year 4 do not need to use standard symbols for electrical components, as this is taught in Year 6.</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • explore how things work. (Nursery - Electricity) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • identify common appliances that run on electricity. • construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. • identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. • recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. • recognise some common conductors and insulators, and associate metals with being good conductors.
<p><u>Year 3 and 4 Year A Summer 1 and 2 - Light</u></p>	
<p><u>Key learning</u> We see objects because our eyes can sense light. Dark is the absence of light. We cannot see anything in complete darkness. Some objects, for example, the sun, light bulbs and candles are sources of light. Objects are easier to see if there is more light. Some surfaces reflect light. Objects are easier to see when there is less light if they are reflective. The light from the sun can damage our eyes and therefore we should not look directly at the sun and can protect our eyes by wearing sunglasses or sunhats in bright light. Shadows are formed on a surface when an opaque or translucent</p>	<p><u>Vocabulary</u> <i>light, light source, dark, absence of light, transparent, translucent, opaque, shiny, matt, surface, shadow, reflect, mirror, sunlight, dangerous</i></p>

Together we learn, grow and dream

<p>object is between a light source and the surface and blocks some of the light. The size of the shadow depends on the position of the source, object and surface.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • explore how things work. (Nursery – Light) • Talk about the differences in materials and changes they notice. (Nursery – Light) • describe what they see, hear and feel whilst outside. (Reception – Light) • identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. (Y1 - Animals, including humans) • describe the simple physical properties of a variety of everyday materials. (Y1 - Materials) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • recognise that they need light in order to see things, and that dark is the absence of light. • notice that light is reflected from surfaces. • recognise that light from the sun can be dangerous and that there are ways to protect their eyes. • recognise that shadows are formed when the light from a light source is blocked by an opaque object. • find patterns in the way that the size of shadows change.
<p><u>Year 5 and 6 Year A Autumn 1 - Evolution and inheritance</u></p>	
<p><u>Key learning</u> All living things have offspring of the same kind, as features in the offspring are inherited from the parents. Due to sexual reproduction, the offspring are not identical to their parents and vary from each other. Plants and animals have characteristics that make them suited (adapted) to their environment. If the environment changes rapidly, some variations of a species may not suit the new environment and will die. If the environment changes slowly, animals and plants with variations that are best suited survive in greater numbers to reproduce and pass their characteristics on to their young. Over time, these inherited characteristics become more dominant within the population. Over a very long period of time, these characteristics may be so different to how they were originally that a new species is created. This is evolution. Fossils give us evidence of what lived on the Earth millions of year ago and provide evidence to support the theory of evolution. More recently, scientists such as Darwin and</p>	<p><u>Vocabulary</u> <i>offspring, sexual reproduction, vary, characteristics, suited, adapted, environment, inherited, species, fossils</i></p>

Together we learn, grow and dream

<p>Wallace observed how living things adapt to different environments to become distinct varieties with their own characteristics.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. (Y2 - Living things and their habitats) • notice that animals, including humans, have offspring which grow into adults. (Y2 - Animals, including humans) • explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. (Y3 - Plants) • describe in simple terms how fossils are formed when things that have lived are trapped within rock. (Y3 - Rocks) • recognise that environments can change and that this can sometimes pose dangers to living things. (Y4 - Living things and their habitats) • describe the life process of reproduction in some plants and animals. (Living things and their habitats - Y5) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. • recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents. • identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.
<p><u>Year 5 and 6 Year A Autumn 2 and Spring 1 - Properties and changes of materials</u></p>	
<p><u>Key learning</u> Materials have different uses depending on their properties and state (liquid, solid, gas). Properties include hardness, transparency, electrical and thermal conductivity and attraction to magnets. Some materials will dissolve in a liquid and form a solution while others are insoluble and form sediment. Mixtures can be separated by filtering, sieving and evaporation. Some changes to materials such as dissolving, mixing and changes of state are reversible, but some changes such as burning wood, rusting and mixing vinegar with bicarbonate of soda result in the formation of new materials and</p>	<p><u>Vocabulary</u> <i>thermal/electrical insulator/conductor, change of state, mixture, dissolve, solution, soluble, insoluble, filter, sieve, reversible/non-reversible change, burning, rusting, new material</i></p>

Together we learn, grow and dream

<p>these are not reversible.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. (Y2 - Uses of everyday materials) • find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching. (Y2 - Uses of everyday materials) • compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. (Y3 - Forces and magnets) • compare and group materials together, according to whether they are solids, liquids or gases. (Y4 - States of matter) • observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). (Y4 - States of matter) • identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature. (Y4 - States of matter) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. • know that some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution. • use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. • give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic. • demonstrate that dissolving, mixing and changes of state are reversible changes. • explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda
<p><u>Year 5 and 6 Year A Spring 2 - Animals including humans</u></p>	
<p><u>Key learning</u> When babies are young, they grow rapidly. They are very dependent on their parents. As they develop, they learn many skills. At puberty, a child's body changes and develops primary and secondary sexual characteristics. This enables the adult to reproduce.</p>	<p><u>Vocabulary</u> <i>Puberty – the vocabulary to describe sexual characteristics</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • notice that animals, including humans, have offspring which grow 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • describe the changes as humans develop to old age

Together we learn, grow and dream

into adults. (Y2 - Animals, including humans)	
<u>Year 5 and 6 Year A Summer 1 - Living things and their habitats</u>	
<p><u>Key learning</u> As part of their life cycle, plants and animals reproduce. Most animals reproduce sexually. This involves two parents where the sperm from the male fertilises the female egg. Animals, including humans, have offspring which grow into adults. In humans and some animals, these offspring will be born live, such as babies or kittens, and then grow into adults. In other animals, such as chickens or snakes, there may be eggs laid that hatch to young which then grow to adults. Some young undergo a further change before becoming adults e.g. caterpillars to butterflies. This is called a metamorphosis. Plants reproduce both sexually and asexually. Bulbs, tubers, runners and plantlets are examples of asexual plant reproduction which involves only one parent. Gardeners may force plants to reproduce asexually by taking cuttings. Sexual reproduction occurs through pollination, usually involving wind or insects.</p>	<p><u>Vocabulary</u> <i>life cycle, reproduce, sexual, sperm, fertilises, egg, live young, metamorphosis, asexual, plantlets, runners, bulbs, cuttings</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • notice that animals, including humans, have offspring which grow into adults. (Y2 - Animals, including humans) • explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. (Y3 - Plants) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. • describe the life process of reproduction in some plants and animals.
<u>Year 5 and 6 Year A Summer 2 - Animals including humans</u>	
<p><u>Key learning</u> The heart pumps blood in the blood vessels around to the lungs. Oxygen goes into the blood and carbon dioxide is removed. The blood goes back to the heart and is then pumped around the body. Nutrients, water and oxygen are transported in the blood to the</p>	<p><u>Vocabulary</u> <i>heart, pulse, rate, pumps, blood, blood vessels, transported, lungs, oxygen, carbon dioxide, nutrients, water, muscles, cycle, circulatory system, diet, exercise, drugs, lifestyle</i></p>

Together we learn, grow and dream

muscles and other parts of the body where they are needed. As they are used, they produce carbon dioxide and other waste products. Carbon dioxide is carried by the blood back to the heart and then the cycle starts again as it is transported back to the lungs to be removed from the body. This is the human circulatory system. Diet, exercise, drugs and lifestyle have an impact on the way our bodies function. They can affect how well our heart and lungs work, how likely we are to suffer from conditions such as diabetes, how clearly we think, and generally how fit and well we feel. Some conditions are caused by deficiencies in our diet e.g. lack of vitamins. This content is also included in PSHE.

Required prior knowledge

Children should know and be able to:

- describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene. (Y2 - Animals, including humans)
- identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. (Y3 - Animals, including humans)
- describe the simple functions of the basic parts of the digestive system in humans. (Y4 - Animals, including humans)
- identify the different types of teeth in humans and their simple functions. (Y4 - Animals, including humans)

End point:

I can:

- identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood.
- recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function.
- describe the ways in which nutrients and water are transported within animals, including humans

Science long term overview - Year B

Year 1 and 2 Year B Autumn 1 - Uses of everyday materials	
<p><u>Key learning</u> All objects are made of one or more materials that are chosen specifically because they have suitable properties for the task. For example, a water bottle is made of plastic because it is transparent allowing you to see the drink inside and waterproof so that it holds the water. When choosing what to make an object from, the properties needed are compared with the properties of the possible materials, identified through simple tests and classifying activities. A material can be suitable for different purposes and an object can be made of different materials. Objects made of some materials can be changed in shape by bending, stretching, squashing and twisting. For example, clay can be shaped by squashing, stretching, rolling, pressing etc. This can be a property of the material or depend on how the material has been processed e.g. thickness.</p>	<p><u>Vocabulary</u> <i>Names of materials – wood, metal, plastic, glass, brick, rock, paper, cardboard</i> <i>Properties of materials – as for Year 1 plus opaque, transparent and translucent, reflective, non reflective, flexible, rigid shape, push/pushing, pull/pulling, twist/twisting, squash/squashing, bend/bending, stretch/stretching</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • distinguish between an object and the material from which it is made. (Y1 - Everyday materials) • identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. (Y1 - Everyday materials) • describe the simple physical properties of a variety of everyday materials. (Y1 - Everyday materials) • compare and group together a variety of everyday materials on the basis of their simple physical properties. (Y1 - Everyday materials) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. • find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.
Year 1 and 2 Year B Spring 1 and 2 - Animals including humans	
<p><u>Key learning</u> Animals vary in many ways having different structures e.g. wings,</p>	<p><u>Vocabulary</u> • <i>head, body, eyes, ears, mouth, teeth, leg, tail, wing, claw, fin,</i></p>

Together we learn, grow and dream

<p>tails, ears etc. They also have different skin coverings e.g. scales, feathers, hair. These key features can be used to identify them. Animals eat certain things - some eat other animals, some eat plants, some eat both plants and animals. Humans have key parts in common, but these vary from person to person. Humans (and other animals) find out about the world using their senses. Humans have five senses – sight, touch, taste, hearing and smelling. These senses are linked to particular parts of the body</p>	<p><i>scales, feathers, fur, beak, paws, hooves</i></p> <ul style="list-style-type: none"> • <i>names of animals experienced first-hand from each vertebrate group</i> • <i>parts of the body including those linked to PSHE teaching</i> • <i>senses – touch, see, smell, taste, hear, fingers (skin), eyes, nose, ear and tongue</i> <p><i>N.B. The children need to be able to name and identify a range of animals in each group e.g. name specific birds and fish. They do not need to use the terms mammal, reptiles etc. or know the key characteristics of each, although they will probably be able to identify birds and fish, based on their characteristics. The children also do not need to use the words carnivore, herbivore and omnivore. If they do, ensure that they understand that carnivores eat other animals, not just meat. Although we often use our fingers and hands to feel objects, the children should understand that we can feel with many parts of our body.</i></p>
<p><u>Required prior knowledge:</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • use all their senses in hands-on exploration of natural materials. (Nursery - Humans) • name and describe people who are familiar to them. (Reception - Humans) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. • identify and name a variety of common animals that are carnivores, herbivores and omnivores. • describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). • identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.
<p><u>Year 1 and 2 Year B Summer 1 and 2 - Plants</u></p>	
<p><u>Key learning</u> Growing locally, there will be a vast array of plants which all have specific names. These can be identified by looking at the key</p>	<p><u>Vocabulary</u> <i>leaf, flower, blossom, petal, fruit, berry, root, seed, trunk, branch, stem, bark, stalk, bud</i></p>

Together we learn, grow and dream

<p>characteristics of the plant. Plants have common parts, but they vary between the different types of plants. Some trees keep their leaves all year while other trees drop their leaves during autumn and grow them again during spring.</p>	<p><i>Names of trees in the local area</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • plant seeds and care for growing plants. (Nursery – Plants) • understand the key features of the life cycle of a plant and an animal. (Nursery – Plants) • begin to understand the need to respect and care for the natural environment and all living things. (Nursery – Plants) • explore the natural world around them. (Reception – Living things and their habitats) • recognise some environments that are different to the one in which they live. (Reception – Living things and their habitats) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. • identify and describe the basic structure of a variety of common flowering plants, including trees.
<p><u>Year 3 and 4 Year B Autumn 1 - Rocks</u></p>	
<p><u>Key learning</u> Rock is a naturally occurring material. There are different types of rock e.g. sandstone, limestone, slate etc. which have different properties. Rocks can be hard or soft. They have different sizes of grain or crystal. They may absorb water. Rocks can be different shapes and sizes (stones, pebbles, boulders). Soils are made up of pieces of ground down rock which may be mixed with plant and animal material (organic matter). The type of rock, size of rock pieces and the amount of organic matter affect the property of the soil. Some rocks contain fossils. Fossils were formed millions of years ago. When plants and animals died, they fell to the seabed. They became covered and squashed by other material. Over time the dissolving animal and plant matter is replaced by minerals from the water.</p>	<p><u>Vocabulary</u> <i>rock, stone, pebble, boulder, grain, crystals, layers, hard, soft, texture, absorb water, soil, fossil, marble, chalk, granite, sandstone, slate, soil, peat, sandy/chalk/clay soil</i></p>

Together we learn, grow and dream

Required prior learning

Children should know and be able to:

- Distinguish between an object and the material from which it is made. (Y1 - Everyday materials)
- Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. (Y1 - Everyday materials)
- Describe the simple physical properties of a variety of everyday materials. (Y1 - Everyday materials)
- Compare and group together a variety of everyday materials on the basis of their simple physical properties. (Y1 - Everyday materials)
- Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. (Y2 - Uses of everyday materials)

End point:

I can:

- compare and group together different kinds of rocks on the basis of their appearance and simple physical properties.
- describe in simple terms how fossils are formed when things that have lived are trapped within rock.
- recognise that soils are made from rocks and organic matter.

Year 3 and 4 Year B Autumn 2 - States of matter

Key learning

A solid keeps its shape and has a fixed volume. A liquid has a fixed volume but changes in shape to fit the container. A liquid can be poured and keeps a level, horizontal surface. A gas fills all available space; it has no fixed shape or volume. Granular and powdery solids like sand can be confused with liquids because they can be poured, but when poured they form a heap and they do not keep a level surface when tipped. Each individual grain demonstrates the properties of a solid. Melting is a state change from solid to liquid. Freezing is a state change from liquid to solid. The freezing point of water is 0oC. Boiling is a change of state from liquid to gas that happens when a liquid is heated to a specific temperature and bubbles of the gas can be seen in the liquid. Water boils when it is heated to 100oC. Evaporation is the same state change as boiling (liquid to gas), but it happens slowly at lower temperatures and only at the surface of the liquid. Evaporation happens more quickly if the temperature is higher, the liquid is spread out or it is windy. Condensation is the change back from a gas to a liquid caused by

Vocabulary

Solid, liquid, gas, state change, melting, freezing, melting point, boiling point, evaporation, temperature, water cycle

Together we learn, grow and dream

<p>cooling. Water at the surface of seas, rivers etc. evaporates into water vapour (a gas). This rises, cools and condenses back into a liquid forming clouds. When too much water has condensed, the water droplets in the cloud get too heavy and fall back down as rain, snow, sleet etc. and drain back into rivers etc. This is known as precipitation. This is the water cycle.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Distinguish between an object and the material from which it is made. (Y1 - Everyday materials) • Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. (Y1 - Everyday materials) • Describe the simple physical properties of a variety of everyday materials. (Y1 - Everyday materials) • Compare and group together a variety of everyday materials on the basis of their simple physical properties. (Y1 - Everyday materials) • Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. (Y2 - Uses of everyday materials) • Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching. (Y2 - Uses of everyday materials) 	<p><u>End point</u> I can:</p> <ul style="list-style-type: none"> • group materials according to their states of matter. • describe how evaporation and condensation happen in the water cycle and how temperature affects evaporation. • identify changes of state and research values of degrees celsius at which changes happen.
<p><u>Year 3 and 4 Year B Spring 1 and 2 - Living things and their habitats and food chains</u></p>	
<p><u>Key learning</u> Living things can be grouped (classified) in different ways according to their features. Classification keys can be used to identify and name living things. Living things live in a habitat which provides an environment to which they are suited (Year 2 learning). These environments may change naturally e.g. through flooding, fire,</p>	<p><u>Vocabulary</u> <i>classification, classification keys, environment, habitat, human impact, positive, negative, migrate, hibernate producer, predator, prey, food chain</i></p>

Together we learn, grow and dream

<p>earthquakes etc. Humans also cause the environment to change. This can be in a good way (i.e. positive human impact, such as setting up nature reserves) or in a bad way (i.e. negative human impact, such as littering). These environments also change with the seasons; different living things can be found in a habitat at different times of the year.</p> <p>Construct and interpret a variety of food chains, identifying producers, predators and prey.</p> <p>Living things can be classified as producers, predators and prey according to their place in the food chain.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. (Y1 - Plants) • Identify and describe the basic structure of a variety of common flowering plants, including trees. (Y1 - Plants) • Identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. (Y1 - Animals including humans) • Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). (Y1 – Animals, including humans) • Identify and name a variety of plants and animals in their habitats, including microhabitats. (Y2 - Living things and their habitats) 	<p><u>End point</u> I can:</p> <ul style="list-style-type: none"> • suggest different ways of sorting the same group of living things. • use classification keys to group and identify members from a range of familiar and less familiar living things. • explain what all plants need to flourish and recognise how these requirements vary in amount. • describe examples of living things that are threatened by changes to environments. • describe why animals depend on the correct nutrition. • construct and interpret a variety of food chains, identifying producers, predators and prey.
<p><u>Year 3 and 4 Year B Summer 1 - Plants</u></p>	
<p><u>Key learning</u> Many plants, but not all, have roots, stems/trunks, leaves and flowers/blossom. The roots absorb water and nutrients from the soil and anchor the plant in place. The stem transports water and nutrients/minerals around the plant and holds the leaves and flowers</p>	<p><u>Vocabulary</u> <i>photosynthesis, pollen, insect/wind pollination, seed formation, seed dispersal (wind dispersal, animal dispersal, water dispersal)</i></p>

Together we learn, grow and dream

<p>up in the air to enhance photosynthesis, pollination and seed dispersal. The leaves use sunlight and water to produce the plant's food. Some plants produce flowers which enable the plant to reproduce. Pollen, which is produced by the male part of the flower, is transferred to the female part of other flowers (pollination). This forms seeds, sometimes contained in berries or fruits which are then dispersed in different ways. Different plants require different conditions for germination and growth.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Observe and describe how seeds and bulbs grow into mature plants. (Y2 - Plants) • Find out and describe how plants need water, light and a suitable temperature to grow and stay healthy. (Y2 - Plants) 	<p><u>End point</u> I can:</p> <ul style="list-style-type: none"> • explain the function of the parts of a flowering plant • describe the life cycle of flowering plants, including pollination, seed formation, seed dispersal, and germination • give different methods of pollination and seed dispersal, including examples and explain observations made during investigations • look at the features of seeds to decide on their method of dispersal • draw and label a diagram of their created flowering plant to show its parts, their role and the method of pollination and seed dispersal.
<p><u>Year 3 and 4 Year B Summer 2 - Forces and magnets</u></p>	
<p><u>Key learning</u> A force is a push or a pull. When an object moves on a surface, the texture of the surface and the object affect how it moves. It may help the object to move better or it may hinder its movement e.g. ice skater compared to walking on ice in normal shoes. A magnet attracts magnetic material. Iron and nickel and other materials containing these, e.g. stainless steel, are magnetic. The strongest parts of a magnet are the poles. Magnets have two poles – a north pole and a south pole. If two like poles, e.g. two north poles, are brought together they will push away from each other – repel. If two unlike poles, e.g. a north and south, are brought together they will</p>	<p><u>Vocabulary</u> <i>force, push, pull, twist, contact force, non-contact force, magnetic force, magnet, strength, bar magnet, ring magnet, button magnet, horseshoe magnet, attract, repel, magnetic material, metal, iron, steel, poles, north pole, south pole</i></p>

Together we learn, grow and dream

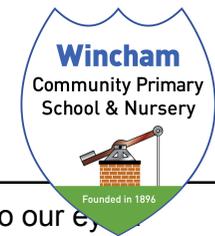

<p>pull together – attract. For some forces to act, there must be contact e.g. a hand opening a door, the wind pushing the trees. Some forces can act at a distance e.g. magnetism. The magnet does not need to touch the object that it attracts.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • Explore how things work. (Nursery – Forces) • Explore and talk about different forces they can feel. (Nursery – Forces) • Talk about the differences between materials and changes they notice. (Nursery – Forces) • Explore the natural world around them. (Reception – Forces) • Describe what they see, hear and feel whilst outside. (Reception – Forces) • Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching. (Y2 - Uses of everyday materials) 	<p><u>End point</u> I can:</p> <ul style="list-style-type: none"> • compare how things move on different surfaces. • notice that some forces need contact between two objects, but magnetic forces can act at a distance. • observe how magnets attract or repel each other and attract some materials and not others. • compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. • describe magnets as having two poles. • predict whether two magnets will attract or repel each other, depending on which poles are facing.
<p><u>Year 5 and 6 Year B Autumn 1 - Living things and their habitats</u></p>	
<p><u>Key learning</u> Living things can be formally grouped according to characteristics. Plants and animals are two main groups but there are other living things that do not fit into these groups e.g. micro-organisms such as bacteria and yeast, and toadstools and mushrooms. Plants can make their own food whereas animals cannot. Animals can be divided into two main groups: those that have backbones (vertebrates); and those that do not (invertebrates). Vertebrates can be divided into five small groups: fish; amphibians; reptiles; birds; and mammals. Each group has common characteristics. Invertebrates can be divided into a number of groups, including insects, spiders, snails and worms. Plants can be divided broadly into two main groups: flowering plants;</p>	<p><u>Vocabulary</u> <i>vertebrates, fish, amphibians, reptiles, birds, mammals, invertebrates, insects, spiders, snails, worms, flowering, non-flowering</i></p>

<p>and non-flowering plants.</p>	
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • recognise that living things can be grouped in a variety of ways. (Y4 - Living things and their habitats) • explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. (Y4 - Living things and their habitats) • describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. (Y5 - Living things and their habitats) • describe the life process of reproduction in some plants and animals. (Y5 - Living things and their habitats) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals. • give reasons for classifying plants and animals based on specific characteristics.
<p><u>Year 5 and 6 Year B Autumn 2 - Light</u></p>	
<p><u>Key learning</u> Light appears to travel in straight lines, and we see objects when light from them goes into our eyes. The light may come directly from light sources, but for other objects some light must be reflected from the object into our eyes for the object to be seen. Objects that block light (are not fully transparent) will cause shadows. Because light travels in straight lines the shape of the shadow will be the same as the outline shape of the object.</p>	<p><u>Vocabulary</u> <i>light, light source, dark, absence of light, transparent, translucent, opaque, shiny, matt, surface, shadow, reflect, mirror, sunlight, dangerous straight lines, light rays</i></p>
<p><u>Required prior knowledge</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • recognise that they need light in order to see things and that dark is the absence of light. (Y3 - Light) • notice that light is reflected from surfaces. (Y3 - Light) • recognise that light from the sun can be dangerous and that there 	<p><u>End point</u> I can:</p> <ul style="list-style-type: none"> • recognise that light appears to travel in straight lines. • use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. • explain that we see things because light travels from light sources

Together we learn, grow and dream

<p>are ways to protect their eyes. (Y3 - Light)</p> <ul style="list-style-type: none"> • recognise that shadows are formed when the light from a light source is blocked by an opaque object. (Y3 - Light) • find patterns in the way that the size of shadows change. (Y3 - Light) • compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. (Y5 - Properties and changes of materials) 	<p>to our eyes or from light sources to objects and then to our eyes.</p> <ul style="list-style-type: none"> • use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Year 5 and 6 Year B Spring 1 and 2 - Earth and Space

<p><u>Key learning</u></p> <p>The Sun is a star. It is at the centre of our solar system. There are 8 planets (can choose to name them, but not essential). These travel around the Sun in fixed orbits. Earth takes 365¼ days to complete its orbit around the Sun. The Earth rotates (spins) on its axis every 24 hours. As Earth rotates half faces the Sun (day) and half is facing away from the Sun (night). As the Earth rotates, the Sun appears to move across the sky. The Moon orbits the Earth. It takes about 28 days to complete its orbit. The Sun, Earth and Moon are approximately spherical.</p>	<p><u>Vocabulary</u></p> <p><i>Earth, Sun, Moon, (Mercury, Jupiter, Saturn, Venus, Mars, Uranus, Neptune), spherical, solar system, rotates, star, orbit, planets</i></p>
<p><u>Required prior learning</u></p> <p>Children should know and be able to:</p> <ul style="list-style-type: none"> • explore the natural world around them. (Reception – Earth and space) • describe what they see, hear and feel whilst outside. (Reception – Earth and space) • observe changes across the four seasons. (Y1 - Seasonal changes) • observe and describe weather associated with the seasons and how day length varies. (Y1 - Seasonal changes) 	<p><u>End point:</u></p> <p>I can:</p> <ul style="list-style-type: none"> • describe the movement of the Earth, and other planets, relative to the Sun in the solar system. • describe the movement of the Moon relative to the Earth. • describe the Sun, Earth and Moon as approximately spherical bodies. • use the idea of the Earth’s rotation to explain day and night and the apparent movement of the Sun across the sky.

Year 5 and 6 Year B Summer 1 - Forces

Together we learn, grow and dream

<p><u>Key learning</u> A force causes an object to start moving, stop moving, speed up, slow down or change direction. Gravity is a force that acts at a distance. Everything is pulled to the Earth by gravity. This causes unsupported objects to fall. Air resistance, water resistance and friction are contact forces that act between moving surfaces. The object may be moving through the air or water, or the air and water may be moving over a stationary object. A mechanism is a device that allows a small force to be increased to a larger force. The pay back is that it requires a greater movement. The small force moves a long distance and the resulting large force moves a small distance, e.g. a crowbar or bottle top remover. Pulleys, levers and gears are all mechanisms, also known as simple machines.</p>	<p><u>Vocabulary</u> <i>force, gravity, Earth, air resistance, water resistance, friction, mechanisms, simple machines, levers, pulleys, gears</i></p>
<p><u>Required prior learning</u> Children should know and be able to:</p> <ul style="list-style-type: none"> • compare how things move on different surfaces. (Y3 - Forces and magnets) • notice that some forces need contact between two objects, but magnetic forces can act at a distance. (Y3 - Forces and magnets) • observe how magnets attract or repel each other and attract some materials and not others. (Y3 - Forces and magnets) • compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. (Y3 - Forces and magnets) • describe magnets as having two poles. (Y3 - Forces and magnets) • predict whether two magnets will attract or repel each other, depending on which poles are facing. (Y3 - Forces and magnets) 	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none"> • explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. • identify the effects of air resistance, water resistance and friction that act between moving surfaces. • recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.
<p><u>Year 5 and 6 Year B Summer 2 - Electricity</u></p>	
<p><u>Key learning</u> Adding more cells to a complete circuit will make a bulb brighter, a</p>	<p><u>Vocabulary</u> circuit, complete circuit, circuit diagram, circuit symbol, cell, battery,</p>

Together we learn, grow and dream

<p>motor spin faster or a buzzer make a louder sound. If you use a battery with a higher voltage, the same thing happens. Adding more bulbs to a circuit will make each bulb less bright. Using more motors or buzzers, each motor will spin more slowly and each buzzer will be quieter. Turning a switch off (open) breaks a circuit so the circuit is not complete and electricity cannot flow. Any bulbs, motors or buzzers will then turn off as well. You can use recognised circuit symbols to draw simple circuit diagrams.</p>	<p>bulb, buzzer, motor, switch, voltage</p> <p>N.B. Children do not need to understand what voltage is, but will use volts and voltage to describe different batteries. The words “cells” and “batteries” are now used interchangeably.</p>
<p><u>Required prior learning</u> Children should know and be able to:</p> <ul style="list-style-type: none">• identify common appliances that run on electricity. (Y4 - Electricity)• Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. (Y4 - Electricity)• identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. (Y4 - Electricity)• recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. (Y4 - Electricity)• recognise some common conductors and insulators, and associate metals with being good conductors. (Y4 - Electricity)	<p><u>End point:</u> I can:</p> <ul style="list-style-type: none">• explain links between the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit.• compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches.• use recognised symbols when representing a simple circuit in a diagram.
